

# Vantage **Plastics**: Customization

Vantage **Plastics** is able to create custom products to meet your needs, whatever they may be. We have created packaging for everything from tiny solenoids to axle assemblies, from seat cushions to entire automotive seat frames, from air conditioners to automobile engines. Anything you need to ship or store, we can create a package for it.

Are you more concerned with maximizing the number of parts in a pack or number of parts in a tray? Our designers can accommodate either need. With your input, Vantage **Plastics** can create a packaging solution that will perform at or above your expectations.

We also produce consumer products, like kayaks, kiddie pools, sleds, and ice shanties. We are able to create custom tooling for just about any type of product.

Have an idea for a new product? Vantage **Plastics** will work with you to develop tooling and a process for producing it.

Our goal is to produce a product that will meet your needs.
