If you are already using thermoformed plastics, but haven't used Vantage **Plastics** as your source, please connect with us to see how we can offer you many advantages.

If you are not currently using thermoformed plastics what system, product, or application can we help you design to bring improvement? We are confident there are a number of yet to be discovered applications for plastics.

Discover our unique approach to working with customers, in discovering new and inventive ways to develop and produce products, which solve problems and improve outcomes.

## Case Example:

A lawn and garden company came to us and needed a shipping solution for small engines. After gathering information about issues and concerns the company had, we designed a thermoformed product to work in conjunction with a steel rack. The customer had concerns that the engine would jump out of its pocket during

shipment. In this case the solution was to attach rubber straps to the tray on one side of the engine, which could be pulled over the engine and hooked on the other side. Thusly the straps hold the engine in place during shipment. Since the straps are attached to the tray they do not get misplaced or lost. The whole system is simple, easy to use, and effective. Most importantly the customer has been very satisfied.

Vantage **Plastics** would welcome the opportunity to work on your lawn and garden project. We offer a great deal of expertise, experience, and capability to provide you with creative, competitive, and effective solutions.
