

# Vantage **Plastics**: Product Capabilities

There is an ever growing list of plastic products being produced using the application of thermoforming. Vantage **Plastics** believes there are an infinite number of yet to be discovered applications, and has the ability to form very large, or small products on-site. During its history Vantage **Plastics** has produced a very wide range of products. Since Vantage **Plastics** is in large part a “Custom” Thermoforming business an infinite number of products can be developed and produced based on the needs of the customer. Plastic products can be produced with a draw as deep as four feet (4’), and as large as nine and a half feet by seventeen and a half feet (9’ 6” x 17’ 6”) single, or twin sheet!

Vantage **Plastics** can form sheets of plastic as thin as three tenths of an inch (0.030”), or as thick as one half inch (.500”). CNC, or Computer Numerical Control robotic trimming, drilling, and die cutting services are available on-site.

Many of the products made at Vantage **Plastics** incorporate steel bars formed into the plastic material to add strength and rigidity. As you can imagine we can produce a very wide range of products. Whether you are already using thermoformed products, or have a project waiting for a better solution, we have the capabilities to help. Please contact us to see how we can be of benefit to you for your product needs. Discover our unique approach to exploring new and inventive ways to develop products which fill needs, and improve outcomes. Working within the parameters of design, and formability, imagination is the only limitation.
