

# Vantage **Plastics**: Recreational & Consumer Goods Industry

Vantage **Plastics** is producing recreational and other consumer products for customers and is establishing an initiative to develop proprietary products within these areas. The growing application for plastics in lieu of other materials has been phenomenal. We see this as a continuing trend. Our processes and the array of new plastic materials with which we work can lend themselves to great product improvement and “out of the box thinking”. We invite potential customers to contact us when considering product development. Our process and materials can often lead to improved product function, reduced costs, enhanced durability, and better customer satisfaction. Most of our product lines are also recyclable thus making them environmentally friendly.
